

I am a subscriber to XM Satellite Radio and urge the rejection of petition 04-160. Satellite radio is the future that has arrived now and attempts to stop this progress is ridiculous at best. Local broadcasting never gives the up to the minute news and weather conditions that are available through this media. This is never more valuable as when traveling by motor vehicle on our nations highways and immediate traffic and weather reports are needed. The American public demands this type of service and there is no justifiable reason that it cannot be provided.
